

## The benefits of an ICT Entry Station.

ICT's Entry Station is a non-proprietary solution designed to operate as a standalone unit or as part of a completely integrated Protege solution. The Entry Station provides an intuitive interface for visitors to communicate with tenants, building management, a concierge, or even to off-site locations, such as directly linking guests with corporate housing owners.

Sleek and modern, Entry Stations utilize two-way communication for audio and video calling. Pair the Entry Station with Protege GX and the Tenancy Portal for a complete multi-tenant solution that works as your digital doorman.

### Key features

- > 17" touchscreen display with high brightness for easy viewing
- > Vandal resistant IP65 rated enclosure
- > Made of marine grade stainless steel
- > 7.5 Mohs rating
- > Two-way communication between SIP compliant phones and intercoms
- > View live video footage from multiple sources
- > Built-in high-resolution camera with wide angle viewing
- > Customizable home page for the display of floor plans, company branding, or advertising
- > Integrates with Protege system controllers to allow control of doors, lights, and elevators
- > 12DVC power supply input or Power over Ethernet (PoE)
- > Full Protege WX and Protege GX integration for user list population and apartment extension listings

### Target applications

- > Multifamily residential buildings
- > Multi-use buildings and facilities
- > Office and commercial buildings
- > Dorms or student accommodation

### Available devices

- > PRT-ENTR-17-SFC: Protege Vandal Resistant Touchscreen Intercom Entry Station (Surface Mount)
- > PRT-ENTR-17-FMT: Protege Vandal Resistant Touchscreen Intercom Entry Station (Flush Mount)
- > USA/CANADA ONLY: PRT-ENTR-17-FMT-RB: Protege Vandal Resistant Touchscreen Intercom (Flush Mount) Rough Box

The Entry Station should not have prolonged exposure to direct sunlight.

A cover is recommended if not in a sheltered space.

## Functionality

There are 3 functionalities available for the Entry Station:

### Standalone Functionality

In standalone mode, VoIP users can be created and edited in the directory via the web interface to allow visitors to search for an apartment number or call an extension from the entry station.

### Protege WX Functionality

By integrating the Entry Station with Protege WX the directory will populate with user records. You can also program the Entry Station to open doors, turn on lights, and provide elevator access.

Entry station integration with Protege WX requires the following to be installed and operational:

- > Protege WX system
- > Protege Vandal Resistant Touchscreen Entry Station

### Protege GX Functionality

By integrating the Entry Station with Protege GX the directory will populate with user records. You can also program the Entry Station to open doors, turn on lights, and provide elevator access.

Entry Station integration with Protege GX requires the following to be installed and operational:

- > Protege GX
- > Protege GX SOAP Service
- > Protege Vandal Resistant Touchscreen Entry Station

There are 2 Client Licences in the base Protege GX license. 1 Client License will be consumed by the entry station and 1 will be consumed by the SOAP Connection.

Therefore, if using SOAP, an additional Client License will need to be purchased.

One Protege GX Client License can support multiple Entry Stations.

### Tenancy Portal

The Tenancy Portal provides an integration with Protege GX to automatically generate phonebooks from user records and enable video calls between the Entry Station and the Protege Mobile App for a sleek and seamless solution to greet guests and delivery drivers.

Using the Protege Mobile App, tenants can see who's calling and grant or deny access right from their phone.
