

Certified in intrusion detection.

The Protege WX and Protege GX DIN Rail Controllers have multiple certifications. But what are they and what benefit do they bring to you?

The certification.

Intruder Detection: CAN/ULC – S304: Standard for control units, accessories and receiving equipment for intrusion alarm systems for Canada.

The meaning and benefit.

ICT's Protege WX and Protege GX DIN Rail controllers meet regulatory requirements for what equipment is used, how it's built, and how it performs for intruder detection reporting.

The controllers monitor and transfer the trouble, alarm, and supervisory (status) signals that are generated from the intruder detection system, allowing the station to alert the appropriate authorities of any signals detected.

Our unified solution means access control and intruder detection are monitored by one central station. No mix-ups or confusion between disparate systems and monitoring stations, giving you and your customers peace of mind that nothing will be missed.

Target applications.

Any place and vertical can benefit from a certified intruder detection and a unified solution, including but not limited to:

- > Residential buildings
- > Apartments
- > Dorms
- > Mixed-use facilities
- > Commercial buildings
- > Office buildings
- > Warehouses and factories

To see the list of requirements for setting up the Protege WX or Protege GX controller for either certification, please see:
