

## Benefits of a Suprema Integration

In high-security environments, security teams have a lot to contend with. Whether it's a bustling airport with tens of thousands of passengers flying through every day or a data center that our modern way of living relies on. Keeping areas and people secure while not impacting convenience or the flow of people can be a real balancing act.

That's where an ICT and Suprema biometric integration comes in. Streamlining operations with simplified user management while increasing your security posture thanks to the single ecosystem and robust access control.

### Key benefits:

#### **Streamlined Operations:**

Simplify your operations by managing users and enrolling biometrics directly within the Protege GX interface - no need to duplicate records or manage multiple systems.

#### **Improved User Experience:**

Use standalone biometric authentication for user convenience or combine with an access reader for the added security of dual authentication.

**Enhanced Security:** Leverage Suprema's cutting-edge biometric authentication for a robust but convenient access control solution.

## Supported features

- > Enroll users and their biometrics in Protege GX
- > Supports dual authentication using ICT credentials and Suprema biometric readers
- > This integration supports a variety of Suprema fingerprint and facial recognition devices
- > Optional programming allows a second finger to be used as a backup

## Who we are

We believe in the confidence and peace of mind that comes from a feeling of true security.

My vision is to make access, intrusion, and automation easy for our customers. A lot of security products are complicated and only offer one service. Our driving idea is that you create success – and value – when you combine them into a unified solution.

**- Hayden Burr, Founder & Chief Innovation Officer, ICT.**

Integrated Control Technology (ICT) is an award-winning global manufacturer of security solutions. For more than 20 years, ICT has led the way with their unified systems for access control, intrusion detection, and building automation.
