Mobile

Delightful to use, effortless to manage. A powerful solution that adapts to the way your organisation works.

Yellowbox is the perfect locker system to support flexible working environment. Within today's workplace, lockers are a 'homebase' that employees can call their own when in the office for the day. The process of booking and accessing a locker on-demand should be effortless for employees coming to work.

Seamless and flexible locker access methods

Users can open a locker in multiple ways - the Yellowbox app, existing RFID Swipe Card, Touchscreen or Company app.

Lockers can be configured to be permanent lockers, self-booked overnight/day lockers, team lockers or parcel lockers.

Saving hours of locker management

Facilities are able to view live status, battery levels, utilisation and audit trail of all lockers, manage multiple locations, allocate lockers to users (and auto-email instructions), configure settings of lockers and even customise the app.
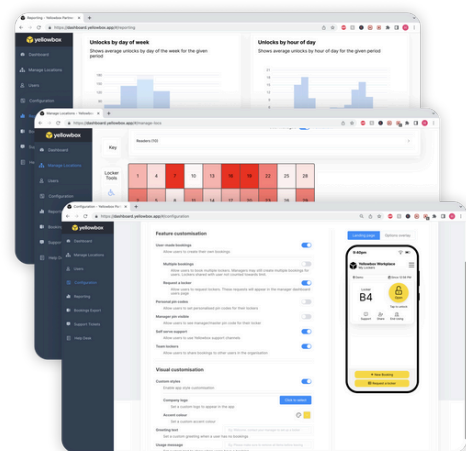

Wireless and wired locks

The Yellowbox wireless and wired locks are simple to install onto any locker shell. Access methods and management software compatible with both locks.

Wired locks allow for a maintenance, battery-free experience. Wireless locks are perfect for smaller locker banks, retrofits or free standing lockers.

Multiple Locker Modes to Meet Requirements

Locker modes can be set to fit the storage needs of the workplace at any time.

LOCKER MODES

Permanent/Flex Lockers

Storage lockers without a set end time. Allowing staff to manage their own locker, keep it for as long as they need and end their booking whenever they like.

Recommended for: Out of office permanent storage for employees.

Hot Lockers

Configure storage lockers with set end times, allowing multiple rules per locker for weekly or time-based expiration.

Recommended for: Day storage for employees when in the office, e.g. Gym bag, umbrella, shoes.

Team Lockers

Assign groups of users to lockers to access team storage. Users can be added and removed with audit trail of locker opens.
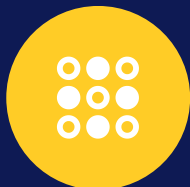

Recommended for: General storage and file cabinets.

Shared Lockers

Users can share their existing locker to another user.

Recommended for: Out of office permanent storage for employees.

Pincode Locker

Lockers set to be PIN lockers, able to be booked anonymously through touchscreen kiosk. These can be set to permanent or hot lockers.

Recommended for: Visitor use

Asset Exchange Locker

Locker booking for item that are exchanged from one user to another.

Recommended for: Asset / IT Exchange, e.g. Laptops

Office Parcel Locker

Deliverer drops off parcel/item to a locker and sets a receiver to receive email notification for collection. Receiver uses existing swipe card or app to open locker.

Recommended for: Parcel Collection / Office Mailroom

Custom Locker Type

Management can create custom locker types to meet unique needs, differentiating from existing locker modes and limiting permissions to certain users or groups.

Recommended for: Custom lockers for team file sharing e.g. 'Project XYZ Files' Locker
