

Finance.

ICT for banking.

Safeguarding and growing your customers' information, assets, and investments is as crucial as maintaining their trust in you and your institution. Yet, despite the advancements of technology in the 21st century, the workload of managing the people and operations of a bank only seems to be increasing.

Bank management and staff are struggling against complex, archaic, and segmented access control and security systems. These proprietary systems not only make meeting compliance more difficult but also add unnecessary challenges to daily operations.

That's where ICT comes in.

- > Provide your staff and customers with the peace of mind they deserve by ensuring the safety and security of both your people and their assets
- > Make the everyday simple with a unified solution that's built for effortless but robust management and oversight
- > We believe in flexible, open technology that gives a greater ROI. Achieve a single pane of glass view by integrating vault and ATM locking solutions, electronic cash drawers, and much more

Key features.

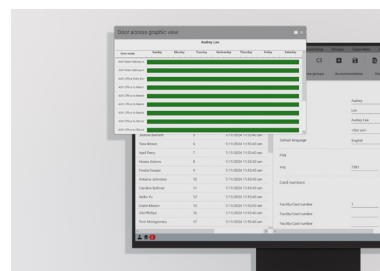

Feature rich solution.

A feature-rich solution with functionality built for finance out of the box – no extra fees or licences – including: vault protection, vault disarm delay, automatic vault re-arm, ATM vestibule protection, and much more.

Anytime, anywhere.

Manage locations down the street or across the country. Use your desktop in the office via the unified dashboard or use your phone while on the move with automatic alerts to keep you informed.

User record management.

Keeping access rights accurate shouldn't be a full time job. Easily updatable user records and user ID management rules, streamlined onboarding, intuitive rules, and a system that is easy to keep up to date.

Real-world example.

When a bank in the Southern United States needed to upgrade their security from an aging Verex system and learned about the simple path to Protege GX, they knew it was a no brainer to make the leap. With over 80 branches and a main operations center at the heart of it all, they required a solution that offered seamless management of schedules and users while providing mobility across locations. Protege GX delivered exactly that. Now, with real-time event notifications sent directly to their smartphones, they can lock doors, disable alarms, and manage user access effortlessly—whether at headquarters or on the go. This upgrade has transformed their security operations, ensuring efficiency and peace of mind.

Before:

- > A clunky, outdated, complex system that couldn't keep up with the banks growing business
- > Difficult to manage employees across branches, resulting in an insecure database
- > Manually having to monitor and update schedules every holiday or weekend
- > Lack of automation

After:

- > Able to monitor and control the nearly 100 strong branch bank from one cohesive interface, including their smartphones
- > Automatic rules for schedules and permissions frees up valuable time and resources
- > No longer limited by their system, Protege GX scales with them as the business grows

Who we are.

We believe in the confidence and peace of mind that comes from a feeling of true security.

“ My vision is to make access, intrusion, and automation easy for our customers. A lot of security products are complicated and only offer one service. Our driving idea is that you create success – and value – when you combine them into a unified solution. - **Hayden Burr, Founder & CEO, ICT.** ”

Integrated Control Technology (ICT) is an award-winning global manufacturer of security solutions. For more than 20 years, ICT has led the way with their unified systems for access control, intrusion detection, and building automation.
