

Scalable security by design.

Protege X is a cloud-based access control and intrusion detection ecosystem, designed for businesses that demand future-proofed flexibility. A subscription-based Software as a Service (SaaS), managed in the Microsoft Azure cloud framework, for simple deployment and even simpler expansion and monitoring.

As long as you have a Protege X subscription, all ICT connected hardware, including controllers, expanders, and even door readers, are covered by an industry leading limited lifetime warranty (terms and conditions apply).

Mobile first experience

Self-monitor and control any number of places from your smartphone. Because Protege X is cloud-based, there's no need to be on the same network as your controller or use a VPN.

Add users, open or lock doors, and oversee daily events from any device. Complete visibility over all your locations, whether it's just down the road or across an ocean.

Centralized programming and management

No duplicate programming or databases across multiple controllers improves installation efficiency and mitigates security risks. Management is simplified as well - understand what's happening across all customer locations at a glance, from one easy to use interface.

Status at a glance

Get the status of your place or location at a glance. Dashboards help you monitor crucial touch points by filtering through the white noise, providing oversight of your security, your buildings, and your people.

ProtegeX[®]

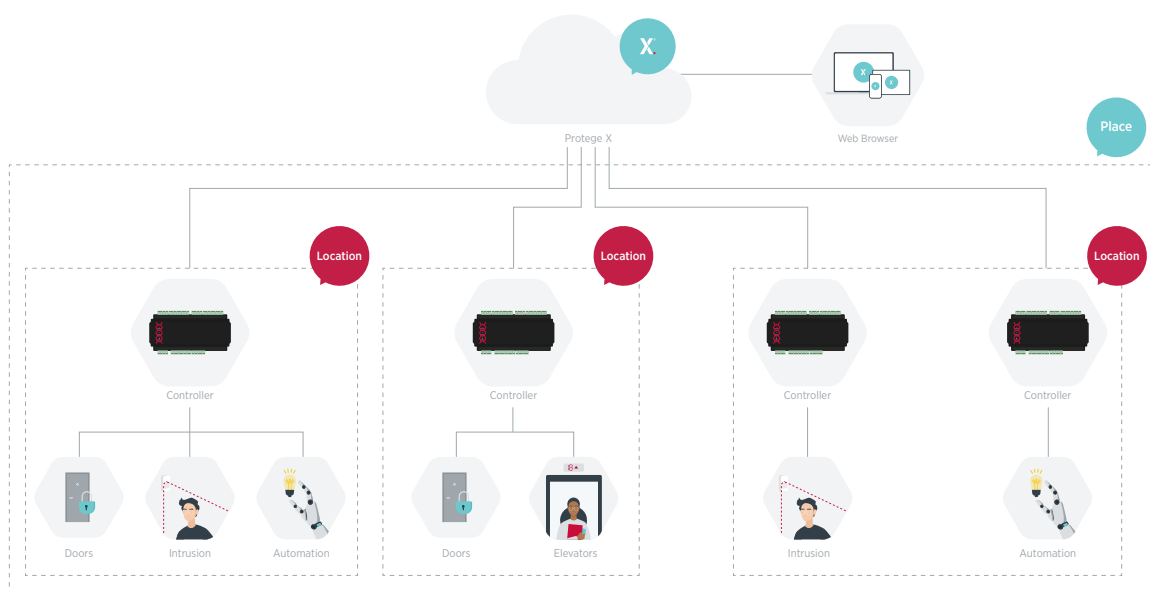

Robust cybersecurity

Powered by Microsoft Azure – one of the most secure cloud infrastructure providers in the world. Microsoft cybersecurity experts test and monitor their database infrastructure 24/7.

Multi-factor authentication is used to log into any apps connected to Protege X and is managed through Azure B2C.

Built to scale

Protege X is built to scale along with your customers' aspirations. Simply add a controller to the new location, connect to the Protege X cloud server, and you're ready to go.
