## Introduction

To display the entry station's live camera feed on capable Grandstream phone, you need to reduce the camera's resolution. This is done using ADB and a specific string of commands in Command Prompt. This application note outlines how to install ADB, how to run the commands, and configuring the Grandstream phone.

### Prerequisites

Ensure that you have the following prerequisites:

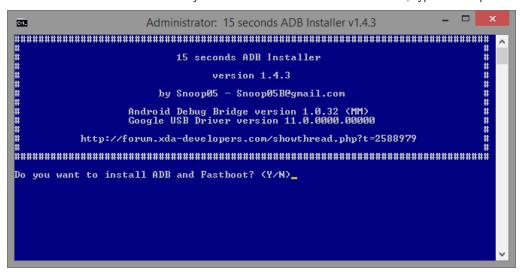

- An entry station running firmware version build 133 or later.
- A Grandstream phone running firmware version 1.0.3.62 or later.

## Configuration

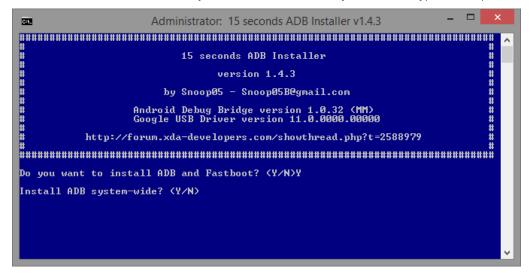

### Installing ADB

To reduce the resolution of the entry station's camera, you need to download and install ADB (http://forum.xda-developers.com/showthread.php?p=48915118#post48915118).

- 1. Once downloaded, open the adb-setup file.
- 2. When the installer asks whether you want to install ADB and Fastboot, type Y and press Enter.

3. When the installer asks whether you want to install ADB system-wide, type Y and press Enter.

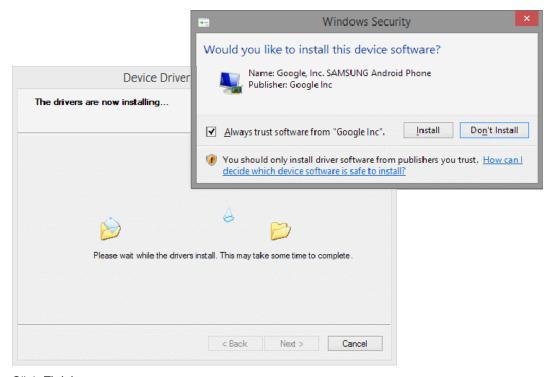

4. If the installation is successful, type Y and press Enter to start installing the drivers.

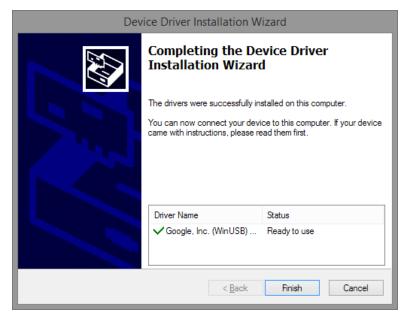

5. Click Next.

#### 6. Click Install.

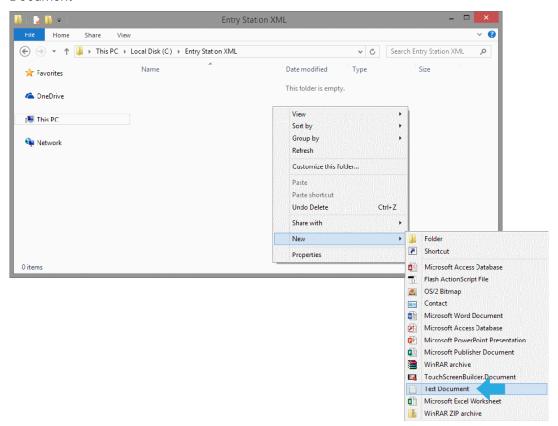

#### 7. Click Finish.

### **Running the Commands**

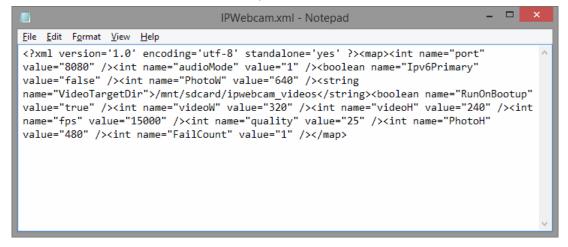

With ADB successfully installed, you can run a series of commands in Command Prompt to push a configuration file through to the entry station.

1. In a new folder created on the C drive of your PC, right click in a blank area and navigate to **New | Text Document**.

- 2. Name the file IPWebcam.xml
- 3. Open file and enter the following string into the document:

<?xml version='1.0' encoding='utf-8' standalone='yes' ?><map><int name="port" value="8080" /><int name="audioMode" value="1" /><boolean name="lpv6Primary" value="false" /><int name="PhotoW" value="640" /><string name="VideoTargetDir">/mnt/sdcard/ipwebcam\_videos</string><boolean name="RunOnBootup" value="true" /><int name="videoW" value="320" /><int name="videoH" value="240" /><int name="fps" value="15000" /><int name="quality" value="25" /><int name="PhotoH" value="480" /><int name="FailCount" value="1" /></map>

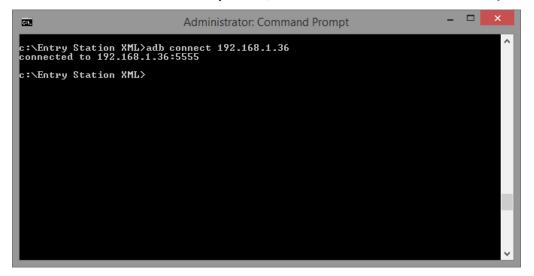

- 4. Save the file (File | Save)
- 5. Press the Windows + R keys to open the Run dialog
- 6. Type **cmd** and press enter to open Command Prompt

Execute the cmd in Administrator Mode in order to run the following commands

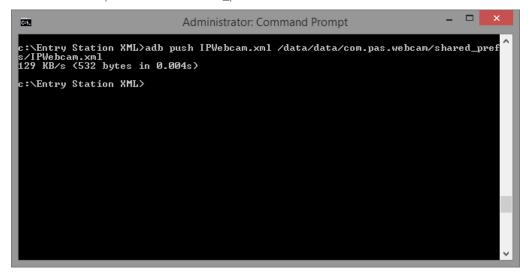

7. Using the cd command, navigate to the location where you saved the IPWebcam.xml file

8. To run ADB and connect to the entry station, enter the command adb connect <entrystation|Paddress>

9. To push the IPWebcam.xml file to the entry station, enter the command, adb push IPWebcam.xml /data/data/com.pas.webcam/shared\_prefs/IPWebcam.xml

10. To reboot the entry station, enter the command: adb shell reboot The entry station may take a few minutes to reboot.

```
Administrator: Command Prompt - c:\adb\adb.exe shell reboot

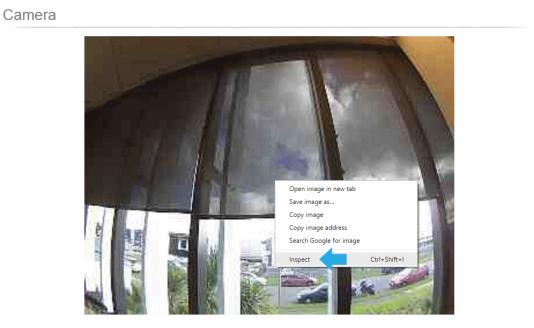

c:\Entry Station XML>adb shell reboot

c:\Entry Station XML>
```

## Verifying the Camera Resolution

Once the entry station has rebooted, you need to verify whether the changes have been correctly applied.

- 1. Launch the web interface and navigate to the Camera menu.
- 2. Right click on the camera feed and select Inspect.

3. Hover over the camera's URL and confirm that its resolution is Natural: 320 x 240 pixels.

```
<!DOCTYPE html>
<html>
▶ <head>...</head>
▼ <body>
  ▼ <div align="center">
    ▶ <div id="container" style="height: 100%;">...</div>
     ▼ <div id="cameradetails">
       ▼<div id="camerapreview">
         ▼<div class="camerapreviewcontainer" align="center">
    <img src="http://192.168.1.36:8080/video?ts=62396" id="camera" alt="Failed to load camera. If
    the problem property places undate your browner," width="50%" height="auto"> == $0
           </div>
         </div>
       </div>
     ▶<div id="aler
                                                                        ≼/script>
      <script type=
    ></script>
    </div>
  </body>
</html>
```

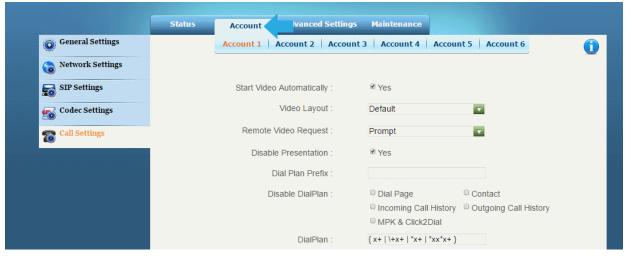

### Configuring the Grandstream Phone

Once the camera's resolution has been reduced, we can link the entry station to the Grandstream phone.

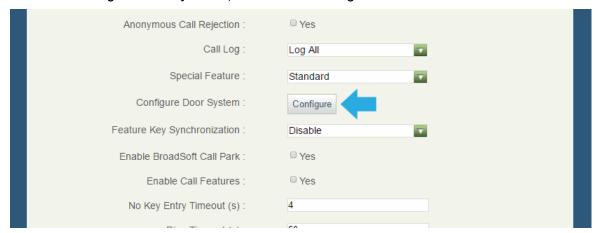

1. To link the Entry Station's camera feed to you Grandstream phone, launch the web interface and login.

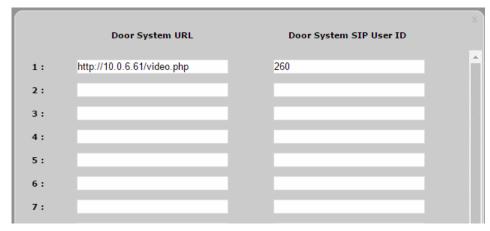

2. Select the Account tab and select the SIP Account that the calls from in from.

3. Locate the Configure Door System option and click Configure.

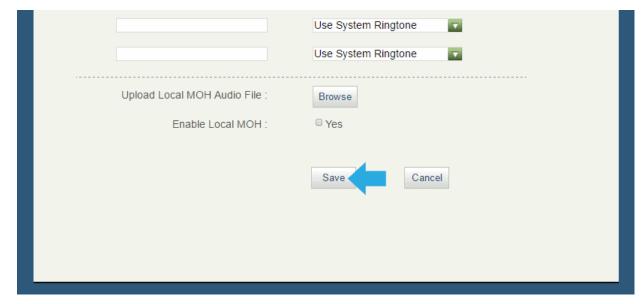

- 4. In the Door System URL field, enter http://{entripaddress}/video.php.
- 5. In the **Door System SIP User ID** field, enter the phone extension of the entry station.

6. Scroll down and click OK.

7. Click Save.

8. At the top of the page, click Apply.
