

## The benefits of a Biometrics System integration.

In high-security environments, security teams have a lot to contend with. Whether it's a bustling airport with tens of thousands of passengers flying through every day or a data center that our modern way of living relies on. Keeping areas and people secure while not impacting convenience or the flow of people can be a real balancing act.

### Increase convenience.

Minimize the risk of missed incidents with pop-up alerts. Guards and operators no longer need to monitor a wall of cameras constantly. Audible notifications and VMS window pop-ups display a live feed whenever incidents like forced door entry or access denial are triggered. Key cameras can also be integrated into the status page, allowing operators to see the floor plan light up while simultaneously viewing the live feed for real-time incident management.

### Increase security.

While cards can be stolen or lost and PINs copied, biometrics are an inherently highly secure access method and security solution. Combined with other forms of access – such as credentials or PINs – you can set up a two-factor authentication method that gives much needed peace of mind for high-security areas. Meeting compliance and regulations is made effortless thanks to the events logged with every access event and easily automated reporting capabilities in Protege GX.

### Increase flexibility.

Our open platform is designed for ultimate flexibility, allowing you to customize it to fit your unique needs while integrating seamlessly with your existing infrastructure. Integrating biometric devices with Protege GX unlocks a whole range of access control features that are normally available from card readers — such as multi-factor authentication, arming and disarming areas, activating automated processes and detailed reports — creating a smarter, more efficient environment.

### Who we are.

We believe that once people feel safe and secure, they can truly succeed.

“ My vision is to make access, intrusion, and automation easy for our customers. A lot of security products are complicated and only offer one service. Our driving idea is that you create success – and value – when you combine them into a unified solution. - **Hayden Burr, Founder & CEO, ICT.** ”

Integrated Control Technology (ICT) is an award-winning global manufacturer of security solutions. For more than 20 years, ICT has led the way with their unified systems for access control, intrusion detection, and building automation.
